

DNSSEC @ Mozilla

Sysadmin Miniconf, LCA 2011

Shyam Mani
shyam@mozilla.com

about:mozilla

Agenda

- The Basics
- Implementation
- What we I messed up

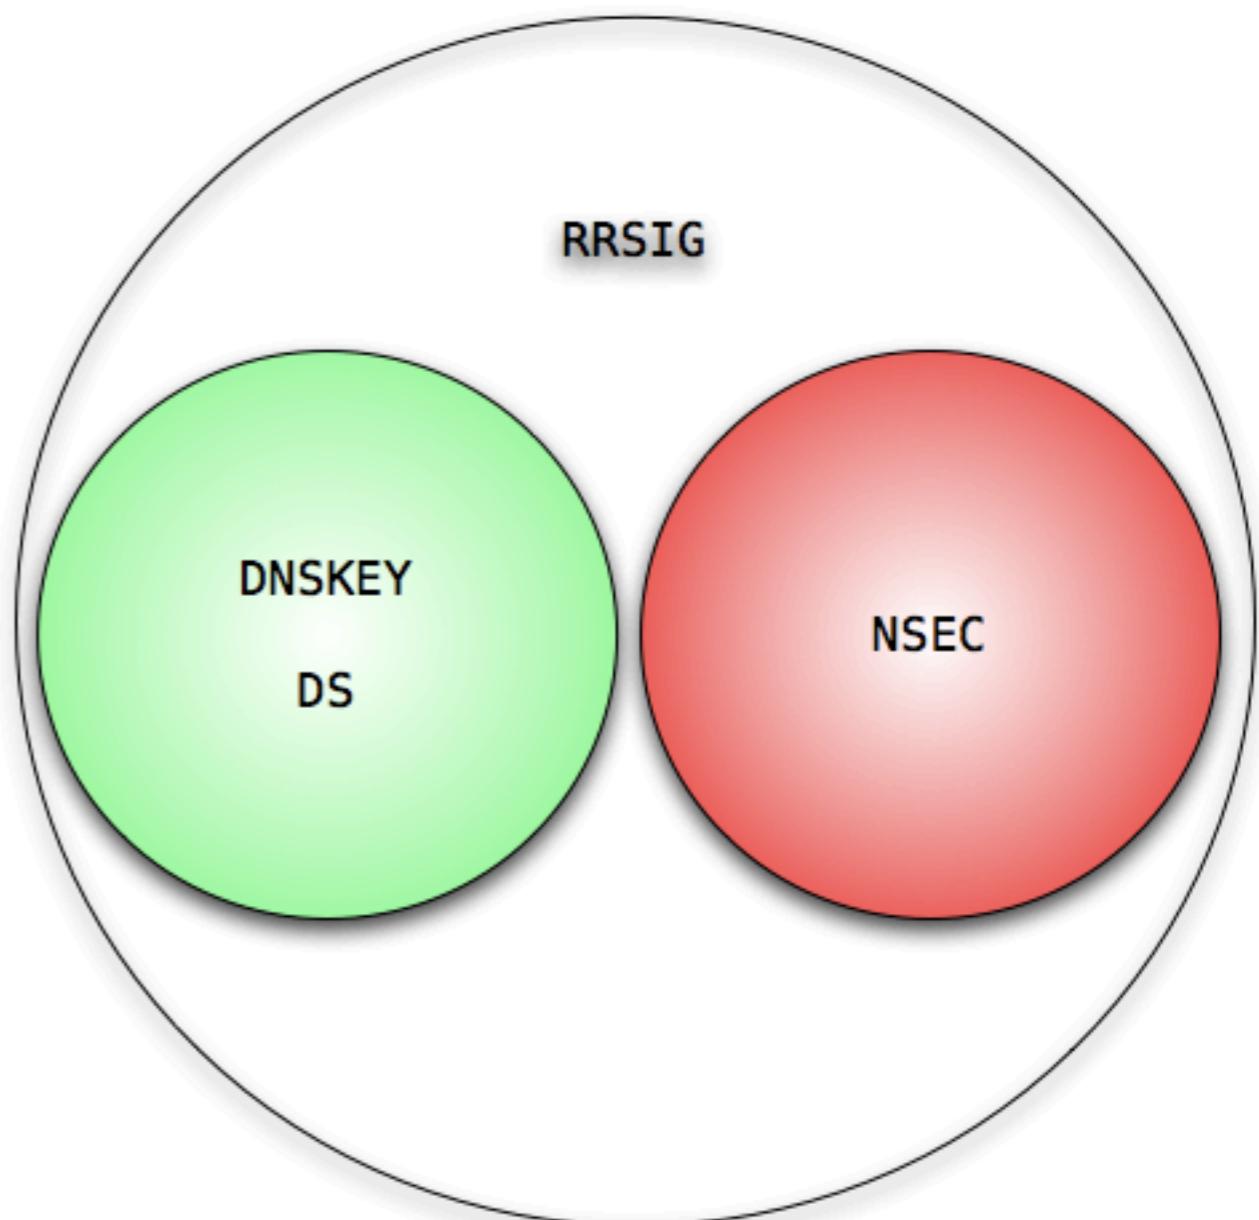

What and the Why

- DNS Security Extensions
 - Based on public key crypto
 - rfc 4033
 - <http://en.wikipedia.org/wiki/DNSSEC>
- DNS wasn't created for today's world
 - DNS cache poisoning

What's new?

- 4 new RRs - rfc 4034
 - DNSKEY
 - DS
 - NSEC/NSEC3
 - RRSIG

What's new?

- Keys - Public and Private
 - Key Signing Key - KSK
 - Zone Signing Key - ZSK
 - Algorithms
 - Rollovers
 - Operational Practices - rfc 4641

Relationships

Debugging DNSSEC problems for [mozilla.org](#)

	<ul style="list-style-type: none">✓ Found 3 DNSKEY records for .✓ DS=19036/SHA1 verifies DNSKEY=19036/SEP✓ Found 1 RRSIGs over DNSKEY RRset✓ RRSIG=19036 and DNSKEY=19036/SEP verifies the DNSKEY RRset✓ . refers to org for mozilla.org✓ Found 2 DS records for org in the referral✓ Found 1 RRSIGs over DS RRset✓ RRSIG=21639 and DNSKEY=21639 verifies the DS RRset
org	<ul style="list-style-type: none">✓ Found 4 DNSKEY records for org✓ DS=21366/SHA256 verifies DNSKEY=21366/SEP✓ Found 2 RRSIGs over DNSKEY RRset✓ RRSIG=1743 and DNSKEY=1743 verifies the DNSKEY RRset✓ org refers to mozilla.org for mozilla.org✓ Found 1 DS records for mozilla.org in the referral✓ Found 1 RRSIGs over DS RRset✓ RRSIG=1743 and DNSKEY=1743 verifies the DS RRset
mozilla.org	<ul style="list-style-type: none">✓ Found 3 DNSKEY records for mozilla.org✓ DS=51618/SHA1 verifies DNSKEY=51618/SEP✓ Found 2 RRSIGs over DNSKEY RRset✓ RRSIG=51618 and DNSKEY=51618/SEP verifies the DNSKEY RRset✓ mozilla.org A RR has value 63.245.209.11✓ Found 1 RRSIGs over A RRset✓ RRSIG=62897 and DNSKEY=62897 verifies the A RRset

Move your mouse over any or symbols for remediation hints.

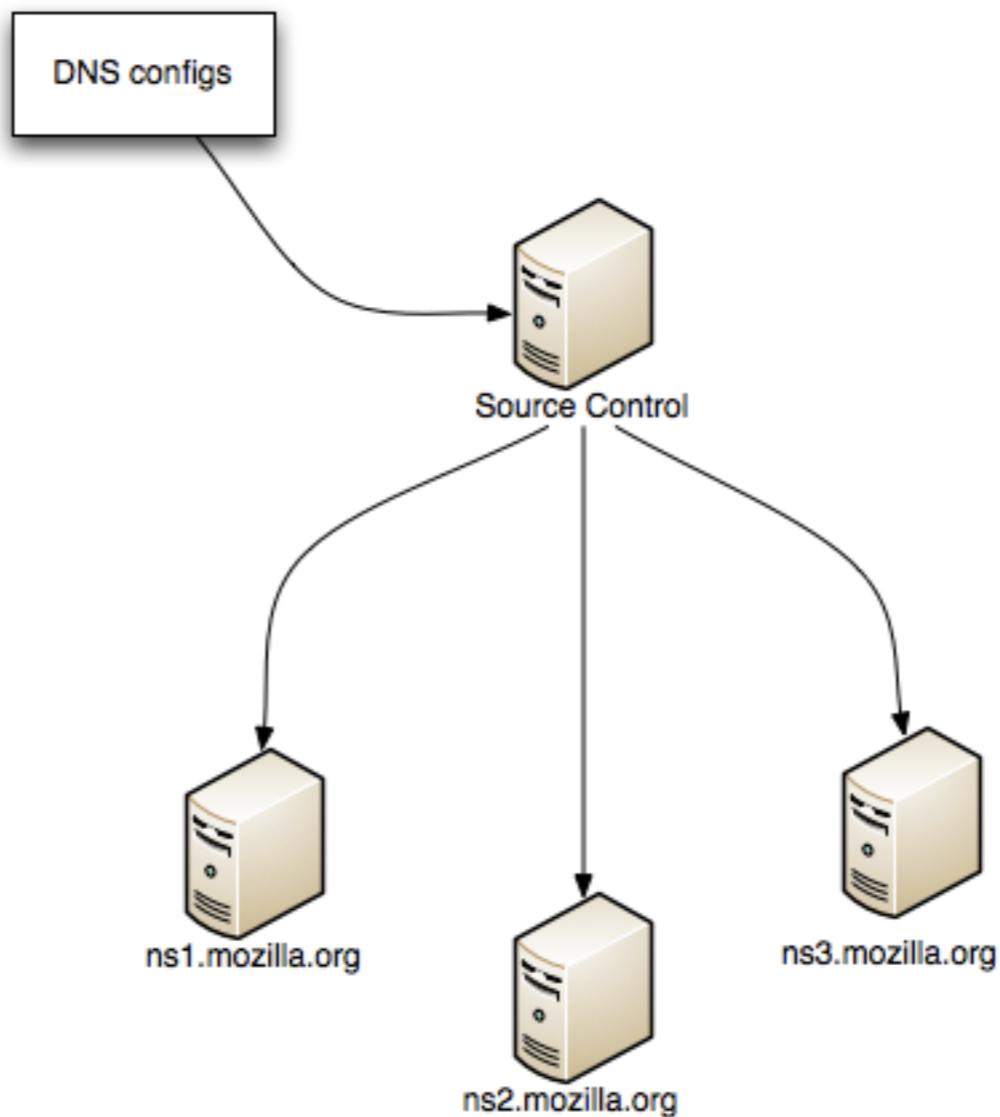

Want a second opinion? Test mozilla.org at [dnsviz.net](#).

Before you leap...

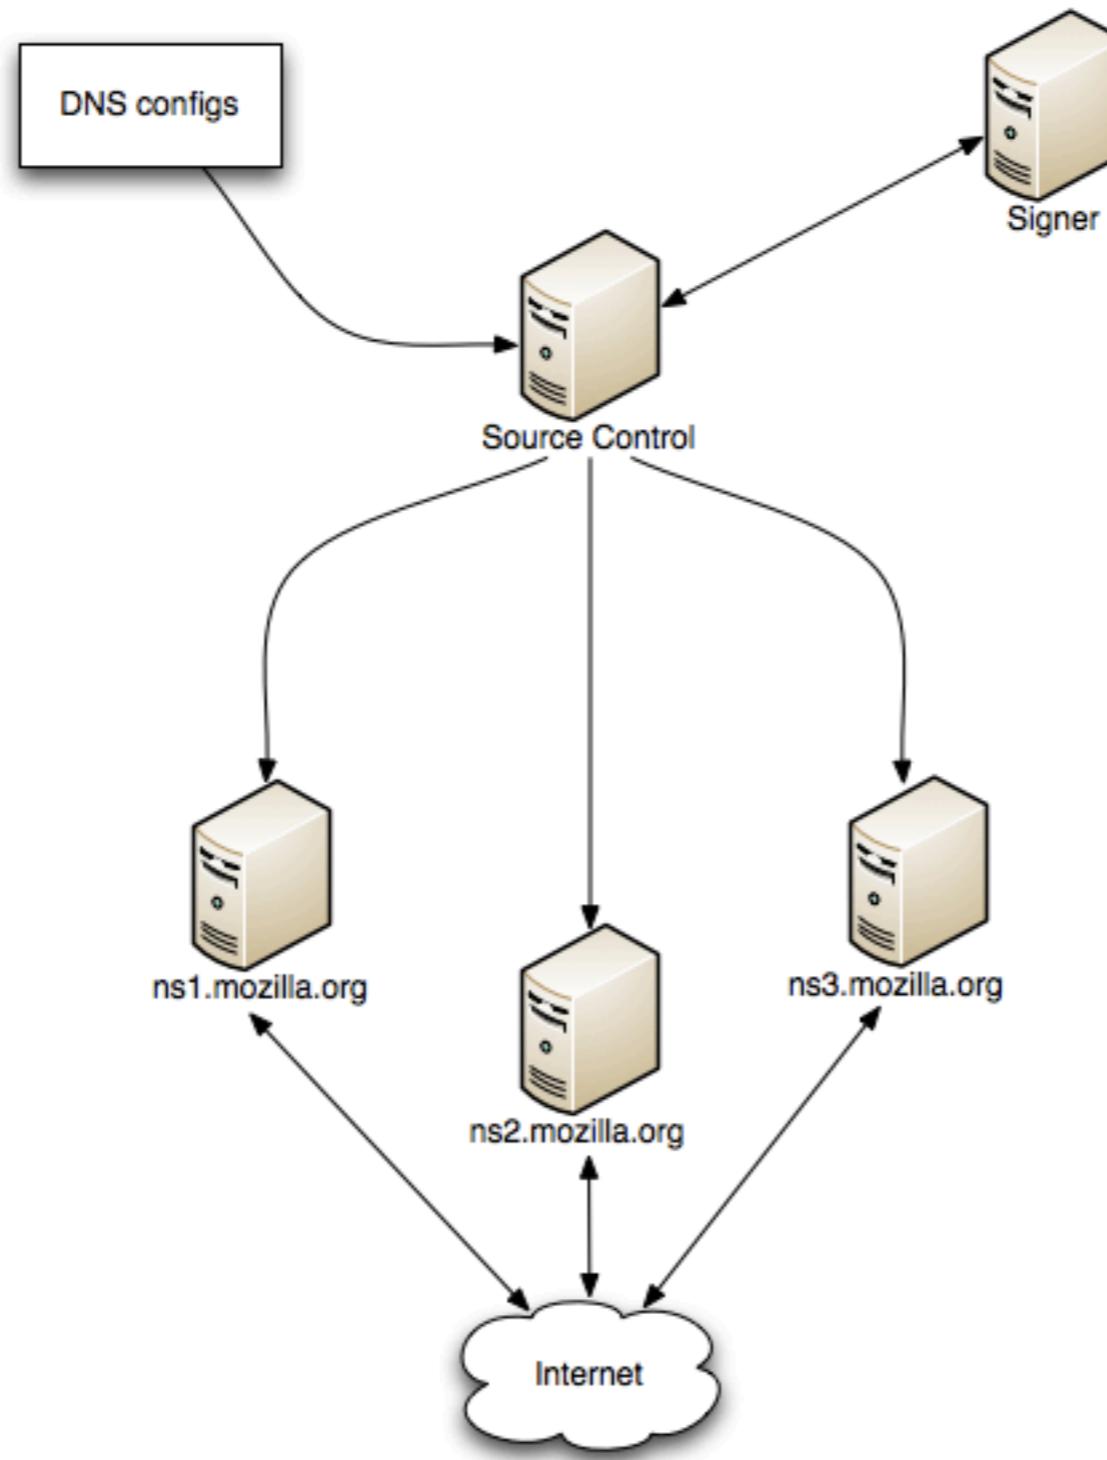

- Check if your TLD has been signed
 - Else you're an Island of Trust
- Check with your registrar about DNSSEC
 - You might have to poke a bit
 - <http://bit.ly/dnssecorg>
- Make sure your software works
 - bind, unbound, opendnssec

Setup - Before

Setup - After

Commands

Generate keys

```
dnssec-keygen -K /mozilla.org/ -3 -n ZONE -f KSK mozilla.org  
dnssec-keygen -K /mozilla.org/ -3 -n ZONE mozilla.org
```

Modify times (if needed)

```
dnssec-settime -A +6mo <keyid>
```

Sign your zones

```
dnssec-signzone -S -K /mozilla.org/ -o mozilla.org -a -t -u -3 salt -H 1 mozilla.org
```

Changes to bind - named.conf

```
dnssec-enable yes;  
dnssec-validation yes;
```

```
zone "mozilla.org" IN {  
    type master;  
    file "mozilla.org.signed";  
}
```

Steps

- Upgrade bind across the board
- Kick off signer
- DNS servers pick up changes and restart
- Profit!!oneone!!

Verify!

Things to be aware of

- Keys are everything, protect them
- Make sure you have a backup plan
- Eventually, you run the risk of your entire domain being unreachable
- Sign (zones), publish (zones) then push (DS)
- Network equipment might need changes

boo-boo(s)

- DS was live, no signed zones aka “Security Lameness”
- Log levels

boo-boo(s)

- Of course, everyone on twitter notices and **#fails** you.

The screenshot shows a Twitter conversation between two users:

- reseauxsansfil** (Roland van Rijswijk) asks: "@fox2mike just out of curiosity: what do you use to sign the zone?" (16 Sep)
- fox2mike** (fox2mike) replies: "mozilla.org is now #dnssec compliant. w00t! <http://bit.ly/avZISM> /cc @mozmrz @Jfitzhugh :D" (16 Sep)
- reseauxsansfil** (Roland van Rijswijk) responds: "@marcodavids never attribute to malice what you can just as easily attribute to stupidity :-D" (16 Sep)
- reseauxsansfil** (Roland van Rijswijk) tweets: "mozilla.org has a #DNSSEC problem, just marked them as insecure our resolver configs #mozilla #firefox #fail" (16 Sep) with options to Favorite, Retweet, or Reply.

boo-boo(s)

npuia Gilles Massen
@fox2mike Out of curiosity: did you get the steps wrong? (1. sign the zone, 2. publish DS record) (and congrats for having it up!)

16 Sep

npuia Gilles Massen
@amelsec With mozilla.org blowing its DNSKEY, the day for DNSSEC could be better...

16 Sep

npuia Gilles Massen
mozilla.org unreachable: should be signed (says .org) but isn't.
Not good. #dnssec #fail
