RatticDB

Elizabet Sørrensen
@zemniph0bia
• Open Source
• Django <3
• Simple to use
• Able to manage humans
  - Departing team members
  - LDAP / Active Directory
• Audit logs for accountability
• Simple API
• Import from KeePass 1.x
Why?!

- Several types:
  - Filesystem
  - Network
  - Post-it Note
- Trouble handling larger teams
- UI’s are often a disaster
- Hard to audit
- Difficult to manage team changes
- Managing ACL’s can be a pain point
- May only work on Windows / OSX
How?!

- Encryption is done on the filesystem
- We rely on HTTPS being setup
- Works on databases supported by Django
- Passwords are in a single group
  - Tagging for organization
- Change queue for your pleasure
- Users can be a member of many groups
- LDAP / AD integration
MY PASSWORD BOOK
Saves nearly 40 passwords

Oh, I forgot my password...
